**STONESTREET ONE TEAMS WITH CLARITY TO OFFER EMBEDDED
BLUETOOTH VOICE SOLUTIONS**

Louisville, Kentucky & Amsterdam, Netherlands, June 16, 2003 – Stonestreet One, a leading provider of Bluetooth software and engineering services, and Clarity, a provider of award winning proprietary software products and algorithms for improved voice communications, have joined forces to offer a fully integrated Bluetooth voice solution. Clarity's award-winning CVC™ (Clear Voice Capture) software will be combined with Stonestreet One's industry-leading Bluetooth protocol stack, Bluetopia®, and the resulting solution will be licensed through Stonestreet One. Both companies' global distribution channels will field inquiries and coordinate customer demonstrations; however, customers will have the convenience of purchasing a combined software solution from just one company. Customers will realize cost and size savings, time-to-market efficiencies and the convenience of software support from one source.

The Bluetopia/CVC solution will be available on multiple platforms, including TI DSPs, Hitachi SHx, and ARM processors, and various operating systems, such as QNX, DSP BIOS, and Linux. The solution will be available in third quarter 2003.

One of the challenges on early releases of Bluetooth products has been the quality of the voice interfaces. Stonestreet One and Clarity will continue to develop enhancements to voice quality and performance, and the Bluetooth specification, and are committed to bringing those enhancements to the market on a regular basis. The companies will work together to promote a complete high-end software solution for a variety of Bluetooth voice-related markets.

"We believe the Bluetooth audio market is set to explode and we have been impressed with Stonestreet One and Bluetopia," said Fred Nussbaum, executive vice president of business development and marketing for Clarity. "Our collaboration began well over a year ago and has been a very positive and integrated experience. We recognize that each of us spends many hours with the same silicon customer teams reviewing specifications for the same projects. We expect that this improved efficiency of having already worked out the integration of a solution will allow lower price points and faster time to market for our customers than approaching them separately."

"We have been hearing from our customers and prospects that they would like a higher quality, more complete Bluetooth voice solution," said Tim Reilly, founder and chief technology officer of Stonestreet One. "Our response is to team with Clarity and to use their award-winning CVC products. The burden shouldn't be on the customer to find and piece together the best possible software to develop Bluetooth voice solutions. Now the customer can avoid a time-consuming and

costly search for inter-operable software and depend on Stonestreet One and Clarity to work to keep this solution current. We see this as a great opportunity to differentiate our Bluetooth offering from others.”

Both Stonestreet One and Clarity are exhibiting at the 2003 Bluetooth World Congress June 17 – June 19 in Amsterdam, the Netherlands.

About Stonestreet One

Stonestreet One designs, develops, and integrates short-range wireless solutions and has been developing custom Bluetooth solutions for a diverse group of customers since 1999. Stonestreet One’s designs and software are enabling and enhancing wireless devices in industries such as mobile communications, biomedical, material handling, consumer products, aerospace and automotive. Stonestreet One, an associate member of the Bluetooth Special Interest Group (SIG) is a Bluetooth design partner for a number of leading semiconductor, electronic component manufacturers and distributors. For more information about Stonestreet One please visit <http://www.stonestreetone.com>.

About Clarity

Clarity LLC, a venture-backed company based in Troy, Michigan and established in April 1998, develops and markets a suite of award winning proprietary software products and algorithms (CVC™ - Clear Voice Capture) that dramatically improve the quality and accuracy of voice-based interfaces, speech recognition software programs and wireless voice communications, particularly in real-world environments. Clarity is also the only noise and echo cancellation technology provider that is an associate member of the Bluetooth SIG.

The Bluetooth SIG is comprised of leaders in the telecommunications, computing and network industries driving development of Bluetooth technology and bringing it to market.
