STONESTREET ONE ANNOUNCES WIMEDIA PROTOCOL SOFTWARE

UltraSuite® MAC Software Enables New High Speed Wireless Capabilities

Louisville, Kentucky (November 28, 2007) – Stonestreet One, Inc., the industry leader in WiMedia-based ultrawideband (UWB) and Certified Wireless USB software solutions for PC and embedded systems, today announced the availability of its new UltraSuite MAC Protocol Software. This new software expands the features and capabilities of the Stonestreet One UltraSuite portfolio for UWB silicon providers, module manufacturers, system integrators, and OEM/ODM customers.

The Stonestreet One UltraSuite MAC Protocol Software is a comprehensive set of embedded firmware and on-chip services designed to run on hardware platforms based on the WiMedia (ECMA 368) MAC specification. The software supports a variety of protocol adaptation layers (PALs) including Certified Wireless USB, WiMedia Link Layer Protocol (WLP), and next generation high data rate Bluetooth. The Certified Wireless USB software includes a complete implementation of dual role device (DRD), which provides Certified Wireless USB peer-to-peer capabilities to Stonestreet One customers. The UltraSuite PAL architecture can support any combination of one or more of these PAL services concurrently, depending on the underlying hardware resources and implementation.

Richard Smith, president of Stonestreet One, said "This new UltraSuite software leverages the capabilities of the WiMedia architecture for our chipset and system licensees. We continue to expand the level of functionality and UWB platform support by delivering these PAL services along with our complementary drivers and applications such as WiCenter to the wireless product community."

In addition to this new software, Stonestreet One also offers corresponding UltraSuite (UWB) and Bluetopia® (Bluetooth) stacks and profiles for a wide variety of platforms and operating system

configurations. These products support a wide variety of systems from PCs to embedded devices, mobile phones, peripherals, and consumer electronics equipment.

Stonestreet One will be showcasing its wireless software products including the new UltraSuite MAC Protocol Software at the upcoming Consumer Electronics Show in Las Vegas January 7-10, 2008 in the WiMedia Tech Zone, Booth #31642 in the Las Vegas Convention Center, South Hall 3. Please contact the company at info@stonestreetone.com to set up a meeting and technology demonstration.

About Stonestreet One

Stonestreet One is a leading provider of wireless communications software products including UWB, Bluetooth, WiFi, and related technologies. The company's WiCenter wireless management application, WiMedia ultrawideband stack, UltraSuite, and Bluetooth protocol stack, Bluetopia, are promoted and used by leading chipmakers, distributors, embedded software companies, and OEMs around the world in computing, automotive, biomedical, mobile communications and consumer electronics products. The company is an active contributing member of the USB Implementers Forum, the WiMedia Alliance, and the Bluetooth SIG. Stonestreet One is headquartered at 322 West Main Street, Louisville, Kentucky 40202, USA. For more information about Stonestreet One and contact details, visit the company website at www.stonestreetone.com.
